## Ray Tracing One Weekend

Ian Turner

June 14, 2024

## 1 Week 0: Ray Tracing Class

## Thursday, 06/13/2023

- course link
- shoutout to **TODO** add x user that pointed me to this (shoutout ml btw (for you page))
- this is my very first c or cpp project (op says it's c flavored cpp) beyond hello worlds and basic basic robotics stuff
- i love rust but i am not cracked at all so i would probably not be able to follow along in rust
- i will, however, follow op's advice to not copy pasta (besides most of makefile compiler flags hehehe) and build it up slowly by typing along
- going to try my best to thug this out by Sunday
- test bib [1]
- bib working lets go
- important setup for fresh arch install (not in order, and just off the dome, i likely am forgetting tons of things)
  - install unzip (will need for nvim clangd Mason lsp stuff)
  - install cmake, clangd, gcc stuff
  - setup debugger for nvim using dap, dap-ui, etc.
  - build, compile, run: (i think lol)
    - 1. cmake -B build/Debug -DCMAKE\_BUILD\_TYPE=Debug
    - 2. cmake --build build/Debug
    - 3. build/rayTracing > image.ppm

\_
